

# Grist Environmental Event Services

## Recycling at Thame Food Festival

### Grist Environmental partnering with Thame Food Festival

**Grist Environmental have partnered with Thame Food Festival** and will be collecting and recycling the waste generated at Thame Food Festival.

Grist Environmental is a family owned Company with over 40 years experience in supplying professional waste collection and recycling services to commercial and private customers across the United Kingdom.

The strong family work ethic complements the businesses core strategy of 'enhancing and improving sustainability' and our mission is to help protect resources for future generations through promoting responsible waste management and carbon awareness. With this as a primary objective we have achieved 'zero waste to landfill' through recycling and landfill diversion.

During the festival our distinctive blue wheelie bins will provide a convenient and safe method for disposing of general and recyclable waste, helping to contain and protect the material from the inclement British weather.

**Please put waste material into these bins and Grist Environmental will do the rest.**

The waste will be collected and transported to our waste transfer station, where it will be mechanically and hand sorted to segregate it into the different waste streams. Recyclable material will be bulked and baled for onward processing and non-recyclable material baled ready for waste to energy production.

Substantial investment in the latest technology allows waste material to be thoroughly processed to achieve the maximum available recycling rate. Even though the material is not fully segregated at source, **it is efficiently sorted and recycled at our facility.**

We welcome your comments and observations and treat all feedback positively, especially when it helps us to improve our service.

Let us all work together to reduce the events environmental impact and improve its sustainability.

**About:** Grist Environmental Event Service's successfully supplies event waste management contracts throughout the UK, and our service is industry acclaimed.

## Waste Hierarchy

Grist Environmental are promoting the Waste Hierarchy in order to extract the maximum practical benefits from products and to generate the minimum amount of waste.

The Waste Hierarchy is a classification of waste management options to minimise the amount of waste produced, from the most effective, Prevention, to the least environmentally friendly, Disposal.

We achieved zero waste to landfill for 2016.
